

# Magicbricks Commercial

---

## Project Report

---

**Project type:** Flutter commercial real-estate management application

**Application name:** Magicbricks Commercial

**Platform:** Flutter with Material Design

**Package name:** `magicbricks_commercial`

**Figma prototype:** [Open the project prototype](#)

---

## 1. Introduction

---

Magicbricks Commercial is a responsive Flutter application designed to support commercial property discovery, evaluation, planning, and account management. The application presents commercial property information in a structured workspace suitable for business owners, property managers, and decision-makers.

The interface provides a unified navigation shell for property search, property details, lease calculations, floor-plan inspection, footfall analysis, compliance information, subscription plans, and profile management.

## 2. Objectives

---

- Provide a clear dashboard for commercial property workflows.
- Help users discover and compare commercial properties.
- Present property details, area statements, and fit-out capacity.
- Support lease and financial calculations.
- Provide visual floor-plan inspection with measurements.
- Display footfall and commercial analytics.
- Organize GST and compliance information.
- Provide plan and pricing information.
- Maintain a responsive layout for desktop and compact screens.

## 3. Technologies Used

---

- **Framework:** Flutter
- **Language:** Dart
- **UI:** Flutter Material widgets and custom widgets
- **State handling:** Stateful Flutter widgets
- **Architecture style:** Feature-based project organization
- **Platforms:** Android, iOS, Web, Linux, macOS, and Windows project targets

- **External packages:** Flutter SDK and Cupertino Icons

## 4. Application Modules

---

### 4.1 Overview

The overview screen acts as the main entry point and provides navigation to the major commercial-property workflows.

### 4.2 Find Properties

Users can browse commercial properties and access relevant property information from the property discovery workflow.

### 4.3 Property Details

The property detail screen presents structured information about a selected property, including its commercial characteristics and supporting details.

### 4.4 Lease Calculator

The lease calculator supports financial planning by allowing users to work with lease-related values and review calculated results.

### 4.5 Floor Plans

The floor-plan viewer displays measured layouts, room labels, dimensions, area information, and fit-out capacity. Users can switch between fitted and bare-shell layouts, adjust zoom, and show or hide dimensions.

### 4.6 Footfall Analytics

The analytics dashboard presents footfall information to help users understand activity patterns and compare visitor trends.

### 4.7 GST and Compliance

The compliance dashboard organizes GST and regulatory information relevant to commercial property operations.

### 4.8 Plans and Pricing

The plans screen presents available commercial service plans and pricing-related information.

### 4.9 Profile

The profile screen contains account information and user-specific settings.

## 5. User Interface and Navigation

---

The application uses a dark navigation sidebar on wider screens and a compact navigation layout on smaller screens. The main content area uses a light workspace background with highlighted cards, structured panels, and consistent action controls.

The primary navigation labels are:

1. Overview
2. Find properties
3. Property detail
4. Lease calculator
5. Floor plans
6. Footfall analytics
7. GST & compliance
8. Plans & pricing
9. Profile

## 6. Floor Plan Viewer Implementation

---

The floor-plan viewer is implemented with a custom painter. The painter draws:

- The outer floor-plan rectangle.
- Internal room divisions.
- Reception, open-office, and meeting areas.
- Fitted-office desks.
- Width and depth measurements.
- A vertically oriented **65 ft** depth measurement outside the right edge of the rectangle.
- A legend for usable, common, and service areas.

The floor-plan screen also includes an interactive viewer and a zoom slider. The selected room is visually emphasized with a highlight color.

## 7. Project Structure

---

```
lib/  
  main.dart  
  core/  
    app_theme.dart  
  data/  
    property_data.dart  
  models/  
    property.dart  
  features/  
    calculator/  
    home/  
    profile/  
    property/  
    reference/  
    saved/  
    tools/  
  shared/  
    widgets/
```

The feature-based structure keeps related screens together and separates application theme, data, models, and reusable widgets.

## 8. Testing and Validation

---

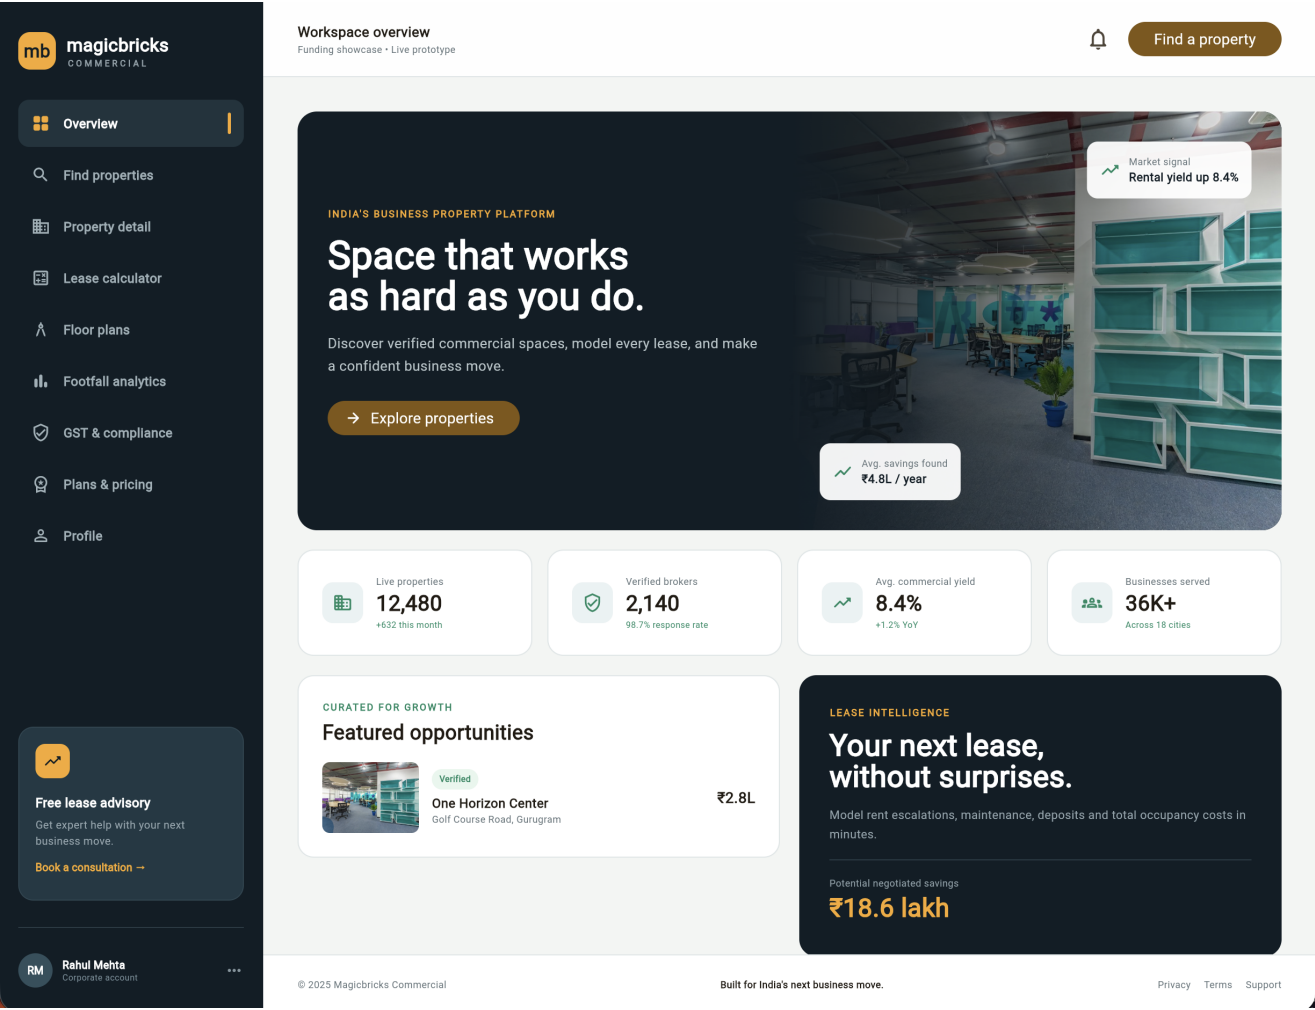

The project includes Flutter widget tests in the `test/` directory. The edited floor-plan file was analyzed with Flutter analysis during development. The floor-plan measurement update was also applied successfully through Flutter hot reload.

Recommended validation steps:

```
flutter pub get  
flutter analyze  
flutter test  
flutter run -d chrome
```

## 9. Screenshots

The property-details screen presents the selected property gallery, rent, carpet area, lease terms, amenities, and maintenance information.

Screenshot 4: Lease Calculator

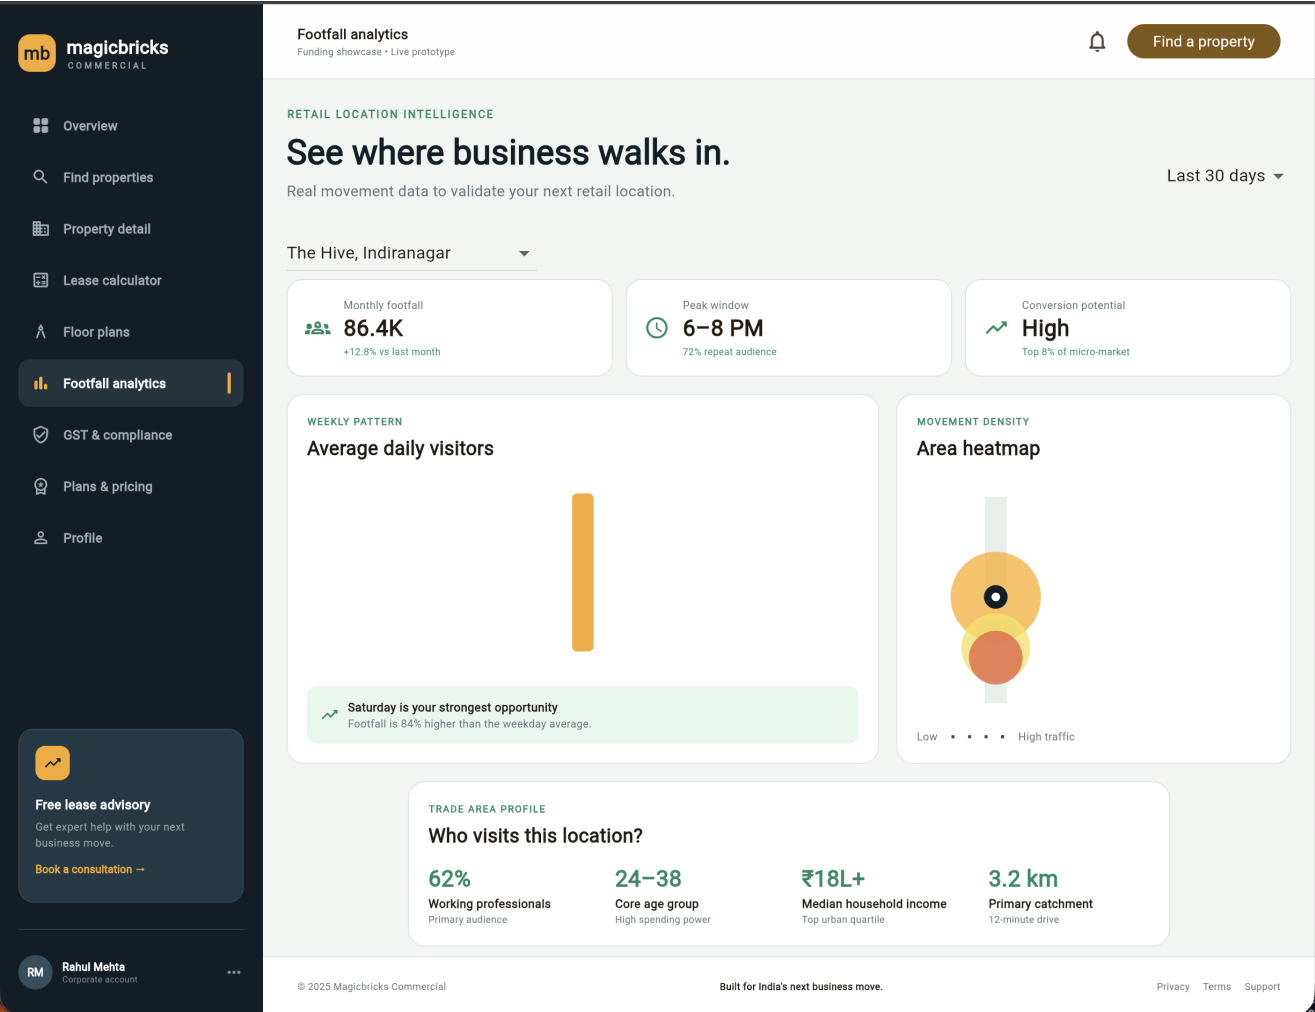

Screenshot 5: Floor Plan Viewer

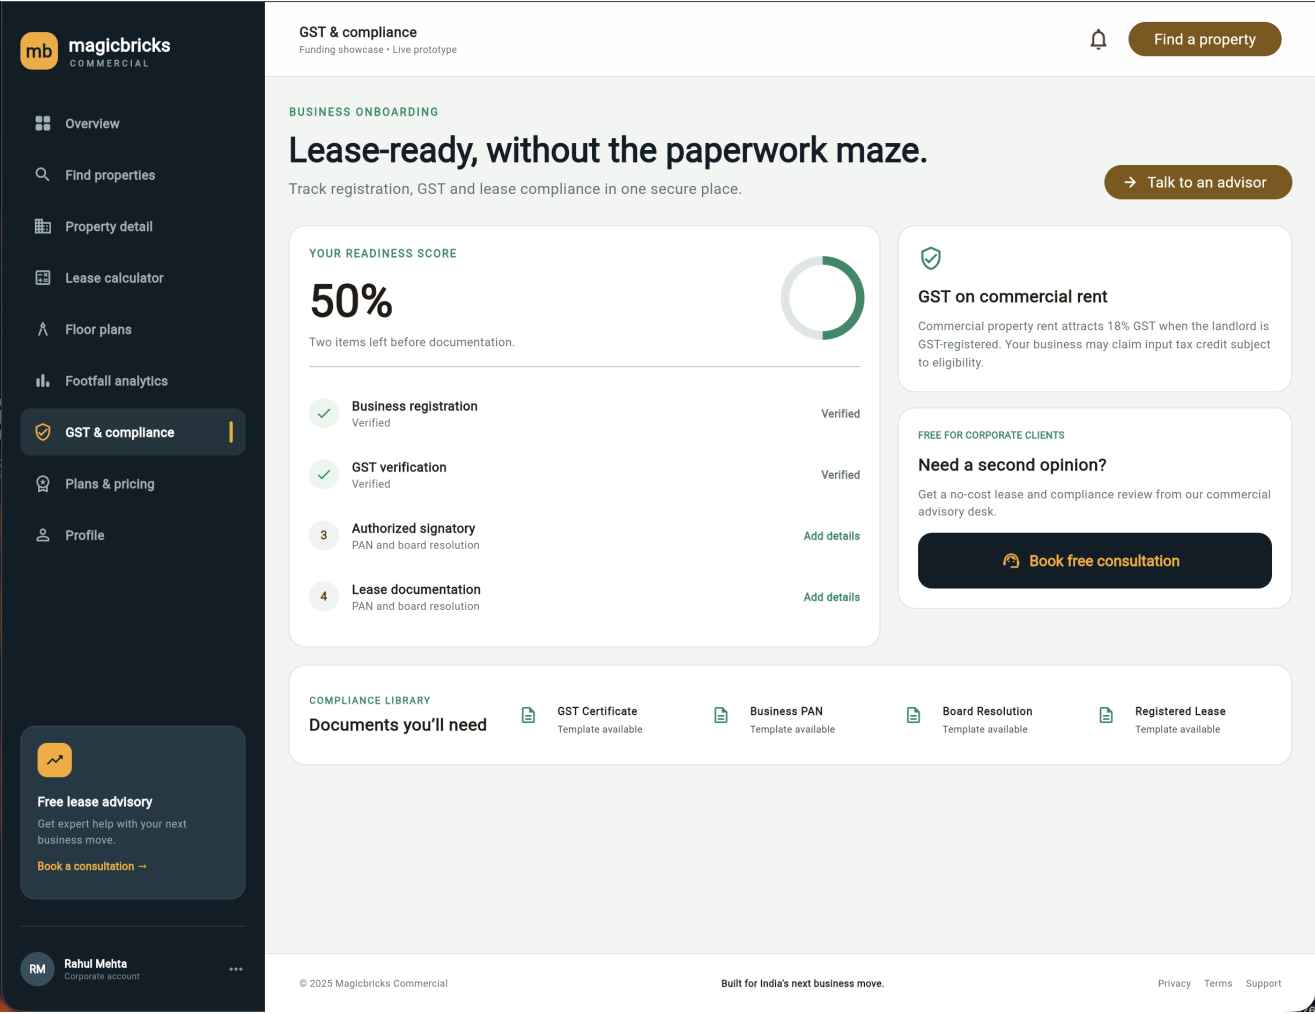

The floor-plan viewer shows the measured office layout, room divisions, fit-out capacity, and the visible 65 ft right-side measurement.

Screenshot 6: Footfall Analytics

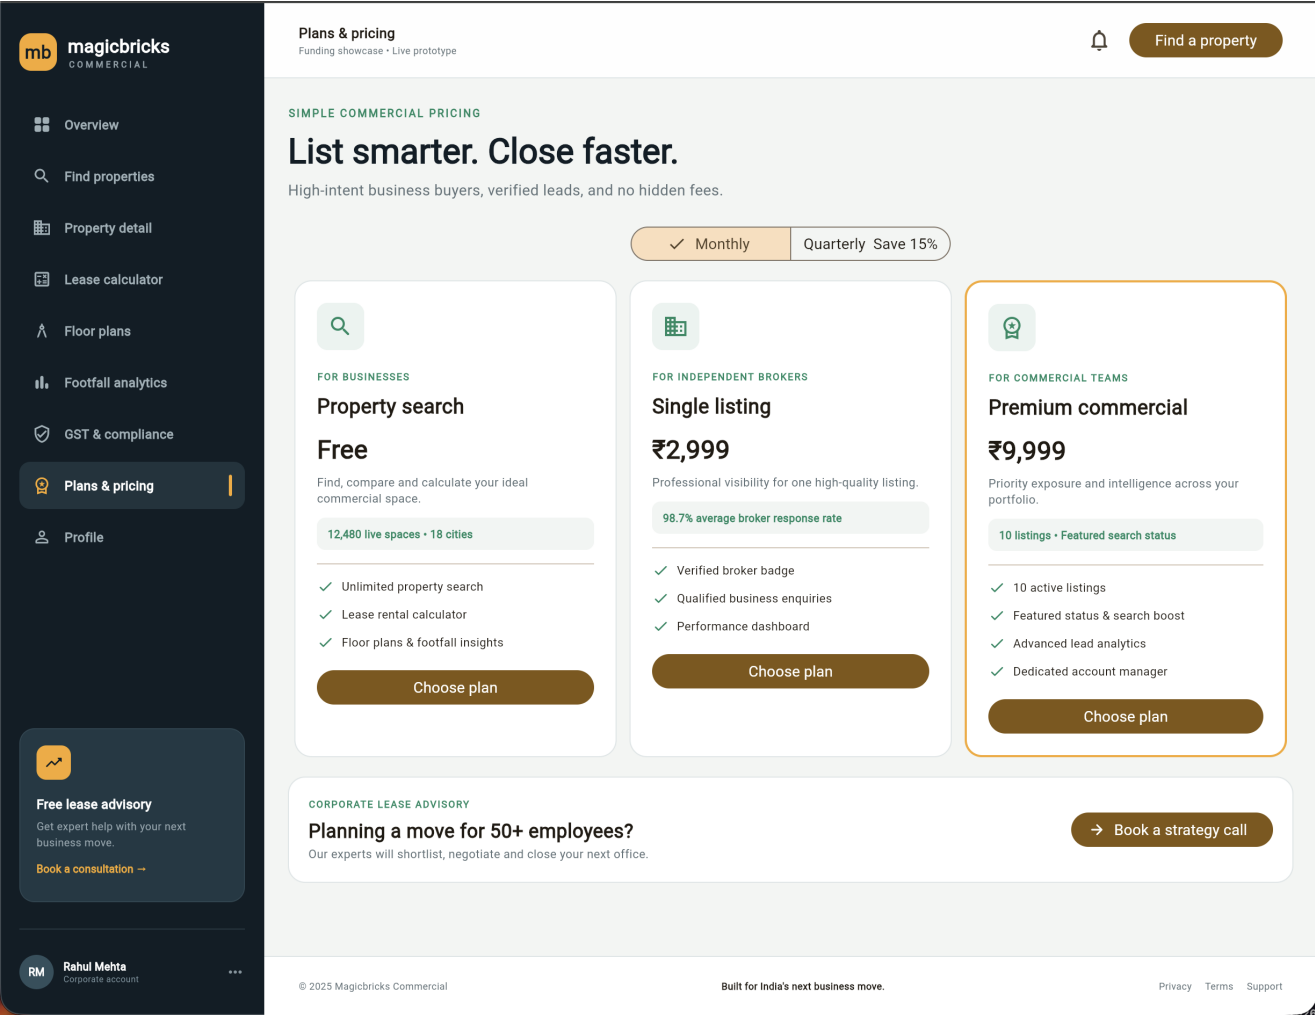

The footfall dashboard displays monthly visitors, peak visiting hours, conversion potential, daily visitor patterns, and area density.

## Screenshot 7: GST and Compliance

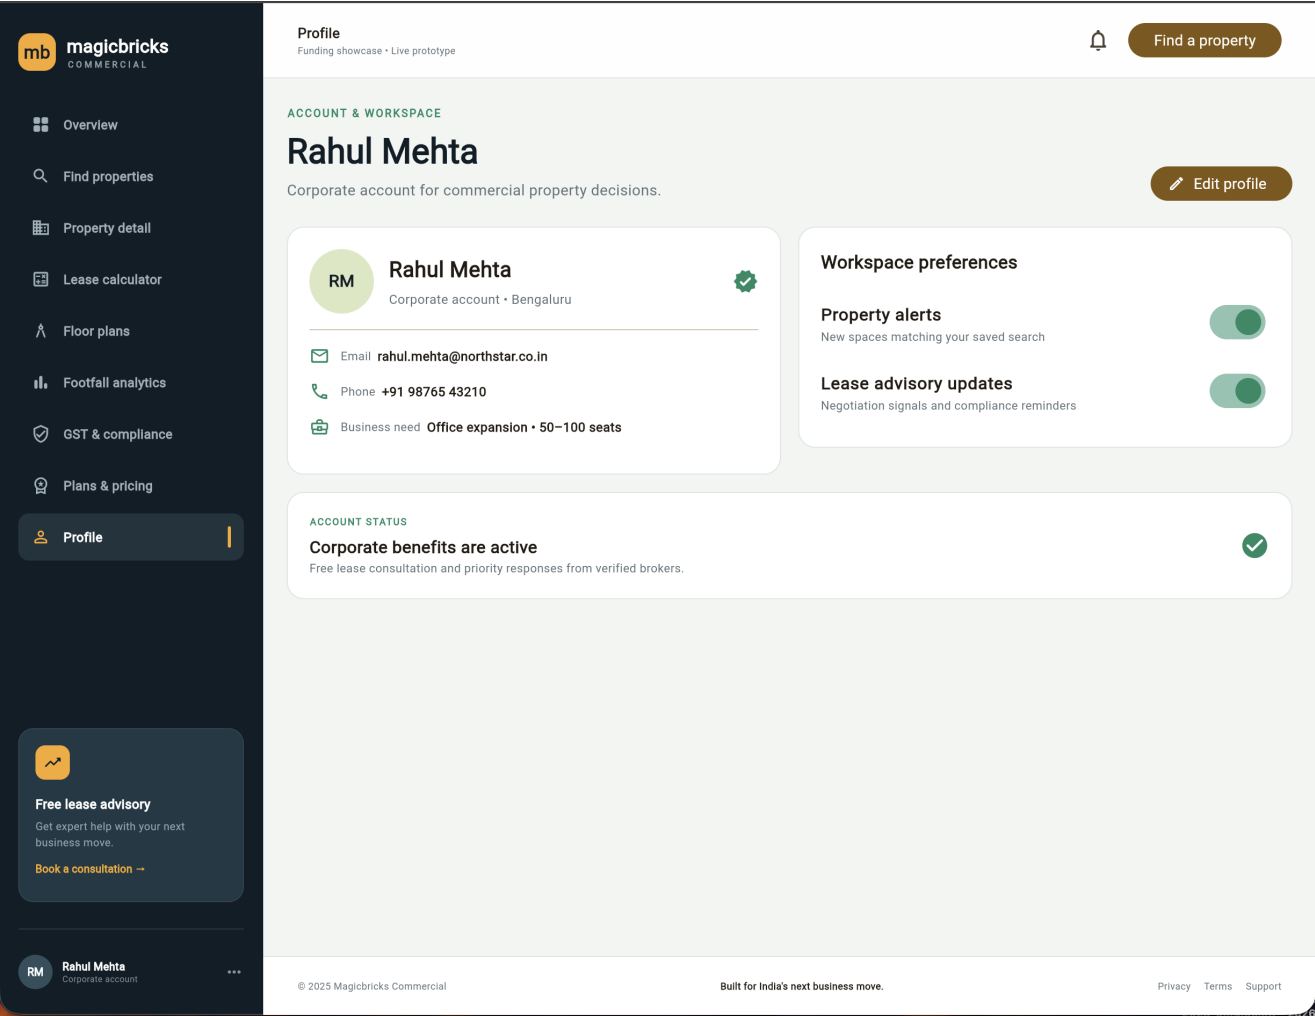

The compliance screen tracks business readiness, GST verification, required documents, and access to lease advisory support.

Screenshot 8: Plans and Pricing

The plans screen compares property search, broker listing, and premium commercial subscription options.

## Screenshot 9: Profile

The profile screen presents the corporate account, contact details, business needs, workspace preferences, and account status.

## 10. Conclusion

Magicbricks Commercial provides a consolidated interface for commercial property workflows. Its feature-based Flutter structure supports maintainability, while the responsive navigation and custom floor-plan visualization make the application suitable for both desktop and compact layouts.

The project can be extended with backend data services, authentication, persistent saved properties, live market data, and production-ready analytics integrations.
